

Praxis Engineering extends its successful strategic partnership with ILC.

Praxis Engineering, a leader in software and systems engineering technologies, is pleased to announce the extension of our strategic reseller agreement with ILC to resell its powerful network management software, MaxView®.

Vice President of Solutions for Praxis, Jeremy Kaufman, states, "Praxis is excited to continue its longstanding and successful relationship with ILC. Together, we have been able to bring ILC's industry leading MaxView product line into the Government to solve some of its most complex equipment control problems. As a result the Government has been able to more rapidly and economically deploy mission critical systems than was possible with previous approaches."

ILC's Vice President of Worldwide Sales, Scott Pranger, echoed Kaufman's sentiments.

"Through our growing relationship with Praxis it has become more and more apparent that the federal government, like the private sector, faces a growing need for solutions to manage and control the many disparate technologies that comprise today's converged networks. The market is expanding for solutions that ensure high reliability and quality of service for both satellite networks and video networks, and we are pleased to continue working closely with Praxis to meet those challenges for our federal and defense clients."

About ILC Software

Headquartered in Atlanta, Georgia, ILC is a Software 500 Company that provides network control software for commercial and government applications in the telecommunications, satellite and broadcast industries. Specializing in hybrid networks, ILC's MaxView Suite automates fault management; configures, schedules, and allocates network resources; and provisions circuits for more than 400 worldwide clients, including PBS, NBC, DirecTV, NET,

Telkom South Africa, France Telecom, EchoStar, Loral Skynet, Portugal Telecom, and U.S.

Department of Defense agencies. For more information, please visit www.ilc.com.
