

Praxis Engineering Joins WebLayers Reseller Program

Annapolis Junction, MD, July 1, 2008 - Praxis Engineering, a leader in software and systems engineering technologies, announced it has entered into a strategic partnership with WebLayers, the market leader for SOA Governance. The partnership will support the sales and customer implementation of The WebLayers Center™ family of products for the Federal Government and the greater Mid-Atlantic region.

The WebLayers Center™ family of products provides a policy-based approach to automate what has traditionally been a manual, labor intensive process of defining and enforcing SOA governance. In use today at many of the world's largest companies and Government agencies, WebLayers Center is the only solution to ensure compliance throughout the lifecycle, providing the necessary visibility and guidance to govern effectively.

"We are seeing more federal companies asking for SOA experts than we have certified partners to fulfill the demand," said Ira Cohen, Vice President of Business and Corporate Development for WebLayers. "When we began exploring relationships with various federal systems integrators, we found Praxis Engineering understood the opportunity and were willing to make the investment to help differentiate their SOA services."

Steve Murphy, Manager of Federal Sales for Praxis Engineering states, "Praxis is excited to be partnering with WebLayers, the clear market leader for automating design time SOA governance. This partnership will enable Praxis to deliver on the benefits of SOA to our customers by leveraging the WebLayers Center™ family of products. The partnership will further enable Praxis to strengthen its SOA offerings with governance oriented services to

expand the extent and quality of our software and services offerings which our clients have come to depend on.”

About WebLayers

WebLayers is the market leader for automated SOA governance. WebLayers Center™ is a policy management solution that automates what has traditionally been a manual, labor intensive process of enforcing governance policies. Based on the industry’s largest collection of pre-built policies, WebLayers enables the world’s largest companies and government agencies to begin their governance effort in design-time, where it will have the most impact, and enforce it through deployment in order to reduce risk and accelerate ROI.
